SOVIET ORDER FOR REPAIR OF TURBINES FOR SS SOVETSKIY SOYUZ; 4 pages; Russian;

25X1A

25X1A

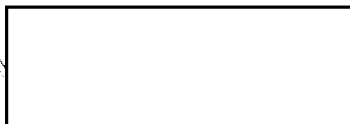

25X1X

This letter, from officials of the Group of Rehabilitation of the Maritime Fleet in Germany, Ministry of Maritime Fleet USSR, to officials of the Ship-Repair Plant, Warnemuende, and the Bergmann-Borsig Plant, Berlin-Wilhelmsruh, concerns the repair of turbines and reduction mechanisms of the SS Sovetskiy Soyuz by these plants.

The plants are requested to furnish the originator of the letter with certain information on the progress of the work by the middle of May 1951. This information should include lists of parts with an indication of defects and extent of wear, and results of running tests of the turbines under various conditions. The letter asks that certain spare parts for the turbines be made, including a complete set of startor and rotor blades, both impulse and reaction. Port and starboard, high, medium, and low pressure turbines are mentioned.

In closing, the letter suggests that it is not feasible for both the plants addressed to work on the repair job, and that it would be better for the Bergmann-Borsig Plant to take on direction of the repair of the reduction mechanisms in addition to the repair of the turbines.
